

# Natsoft acquires Updraft

Gets a new capability to offer  
automated application modernization!

Natsoft Corporation, New Jersey, US headquartered boutique IT services company announced the acquisition of Updraft, a 14 year Palatine, Illinois, US based automated application modernization company. Updraft helps its clients to migrate legacy codes like Cobol, Cold fusion and various other legacy languages to Java and other modern language platforms. Updraft's automated tools make this happen in 100% automated and touchless migration with substantially lesser people, time and cost while delivering high quality. Many multinational clients and large system integrators have relied on Updraft's automated tools for their legacy migration and application modernization. Updraft has always demonstrated 100% success rate in legacy modernization.

Speaking on the occasion Timmy Cheedala, CEO of Natsoft, welcomed all the Updraft associates to the Natsoft family and said this is terrific synergy. He further said, with Updraft in its fold, it would help Natsoft reinforce its position as a preferred partner for all companies seeking 100% automated legacy migration and application modernization.

Dr. Thomas Weigert who took over as CEO of Updraft (formerly CTO) says, it's a great acquisition for Natsoft. I am confident they would take the tools across the globe and help large companies seek the automated route to application modernization. At Updraft we've been continuously upgrading the tools to align to the ever-evolving technology ecosystem. The fact, several patents are granted to Updraft is an acknowledgement of the tools.

Srinivas Cheedella (Sri), President and Managing Director at Natsoft who has been leading the Updraft acquisition, said the power of complementing zero touch automated application modernization tools with the System Integration services of Natsoft, will all help offer end to end engagement to our clients.
